Excellent work! See comments to see what additional suggestions you may consider integrating, both below and in your PDF submission.

Visualization Design	Description and Justification
- There are unique visualization components that make the overall app interesting and engaging. - This may be because it's only a mock-up now but it's difficult to see the overall layout. - For Figure 2, you could also consider plotting car production along the x-axis and CO2 emission along the y-axis to make the correlation more obvious. To highlight the timeline, you can add the points in order. (But keep all interactions)	- The discussion includes detailed descriptions of the design along with justifications. - The interactions and transitions are thoroughly justified in general but it wasn't clear what type of interaction i used for the first figure. - The development plan is detailed and well balanced.
